

# 16-CHANNEL COLOR LED DRIVER

## DESCRIPTION

The IS31FL3726A is a serial shift-register-plus latch-type LED driver. It is comprised of 16 constant-current open drain sinks designed for driving common anode LEDs. The output current value can be set from 5mA to 60mA by using an external resistor.

As a result, all outputs will have virtually the same current levels.

This driver incorporates 16 constant current outputs, a 16-bit shift register, a 16-bit latch and a 16-bit AND-gate circuit.

The IS31FL3726A is an industry standard serial shift-register-plus latch-type LED driver operating from a 3V to 5V supply. It is comprised of 16 constant-current open drain sinks designed for driving common anode LEDs. The output current value can be set from 5mA to 60mA by using an external resistor. As a result, all outputs will have virtually the same current levels. This driver uses a high-speed 4-wire serial interface of up to 30MHz to drive 16 constant current outputs, a 16-bit shift register, a 16-bit latch and a 16-bit AND-gate circuit. Serial input data appears at the output OUTx channels after 16 clock cycles. Driving the Latch pin will load the 16-bit of shift-register data into the 16-bit output latch to drive the LEDs ON or OFF. The Enable pin can be used as a PWM input to adjust the LED brightness.

## FEATURES

- Output current capability and number of outputs: 60mA × 16 outputs
- Constant current range: 5mA to 60mA  
 $I_{OUT\_MAX} = 45mA @ V_{CC} = 3V$   
 $I_{OUT\_MAX} = 60mA @ V_{CC} = 3.3V$
- For anode-common LEDs
- Power supply voltage range,  $V_{CC} = 3.0V$  to  $5.5V$
- Serial and parallel data transfer rate: 30MHz (Max. cascade connection)
- Operating temperature range,  $T_A = -40^{\circ}C \sim +125^{\circ}C$
- Package: QFN-24 (4mm×4mm), SSOP-24 and eTSSOP-24
- Current accuracy (All output on)
  - Bit to bit:  $< \pm 5\%$ .
  - Device to device:  $< \pm 7\%$ .

## ORDERING INFORMATION

Part No.	Temperature Range	Package
IS31FL3726A-ZLS4-EB	-40°C to +125°C (Industrial)	eTSSOP-24, Lead-free

Table 1: Ordering Information

## QUICK START

Figure 1: Photo of IS31FL3726A Evaluation Board

## RECOMMENDED EQUIPMENT

- 5.0V, 2A power supply

## ABSOLUTE MAXIMUM RATINGS

- $\leq 5.5V$  power supply

**Caution:** Do not exceed the conditions listed above, otherwise the board will be damaged.

## PROCEDURE

The IS31FL3726A evaluation board is fully assembled and tested. Follow the steps listed below to verify board operation.

**Caution:** Do not turn on the power supply until all connections are completed.

- 1) Short JP1/Jp2/Jp3/Jp4/Jp5 in TP1.
- 2) Connect the 5V DC power to VCC (JP7) / GND (JP6), or plug in the USB power input to micro-USB (CON1).
- 3) Turn on the power supply/Plug in the Micro USB Pay attention to the supply current. If the current exceeds 1A, please check for circuit fault.

For pricing, delivery, and ordering information, please contact Lumissil's analog marketing team at [analog@Lumissil.com](mailto:analog@Lumissil.com) or (408) 969-6600.

# 16-CHANNEL COLOR LED DRIVER

## EVALUATION BOARD OPERATION

The IS31FL3726A evaluation board has three animation display modes. Toggling the MODE button (K1) can switch the modes.

- 1) All LEDs light up
- 2) Four LEDs swing
- 3) LEDs Scroll to left
- 4) Police lights flashing

**Note:** IS31FL3726A solely controls the FxLED function on the evaluation board.

## SOFTWARE SUPPORT

JP1/JP2/JP3/JP4/JP5 in TP1 default setting is closed (jumper on). If it is open (no jumper), the on-board MCU will configure its own S\_IN/CLOCK/LATCH/ENABLE pins to High Impedance status so an external source can driver the serial and parallel data transfer signals to control the IS31FL3726A LED driver.

Figure 2: Photo of Arduino UNO connected to Evaluation Board

The steps listed below is an example of using the Arduino for external control.

The Arduino hardware consists of an Atmel microcontroller with a bootloader allowing quick firmware updates. First download the latest Arduino Integrated Development Environment IDE (1.6.12 or greater) from [www.arduino.cc/en/Main/Software](http://www.arduino.cc/en/Main/Software). Also download the Wire.h library from [www.arduino.cc/en/reference/wire](http://www.arduino.cc/en/reference/wire) and verify that pgmspace.h is in the directory ...program Files(x86)/Arduino/hardware/tools/avr/avr/include/avr/. Then download the latest IS31FL3726A test firmware (sketch) from the Lumissil website <http://www.lumissil.com/products/led-driver/fxled>.

- 1) Open JP1/JP2/JP3/JP4/JP5 in TP1.
- 2) Connect the 6 pins from Arduino board to IS31FL3726A EVB:
  - a) Arduino 5V pin to IS31FL3726A EVB PVCC.
  - b) Arduino GND to IS31FL3726A EVB GND.
  - c) Arduino S\_IN (13) to IS31FL3726A EVB S\_IN.
  - d) Arduino CLOCK (12) to IS31FL3726A EVB CLOCK.
  - e) Arduino LATCH (11) to IS31FL3726A EVB LATCH.
  - f) Arduino ENABLE (10) to IS31FL3726A EVB ENABLE.
- 3) Use the test code in appendix I or download the test firmware (sketch) from the Lumissil website, a .txt file and copy the code to Arduino IDE, compile and upload to Arduino.
- 4) Run the Arduino code as appendix I.

**Please refer to the datasheet to get more information about IS31FL3726A.**
